Elgato Video Capture

How to Use

1. Identify your video source. Connect Elgato Video Capture to

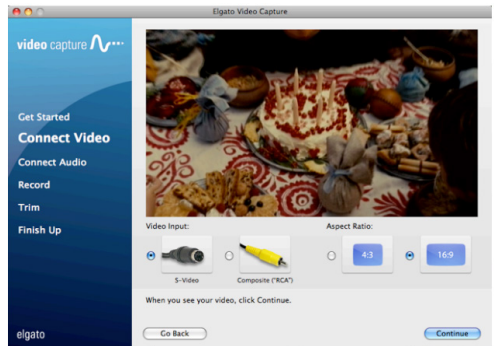

Composite Video: Connect the yellow composite video input to the corresponding output of your video source. Also connect the RCA audio inputs with the audio outputs of the source.

2. Connect the **Elgato Video Capture** to a USB port on your computer.
3. Download and install the **Elgato Video Capture application** from www.elgato.com/downloads.
4. Launch the application and begin using the software with the following instructions.

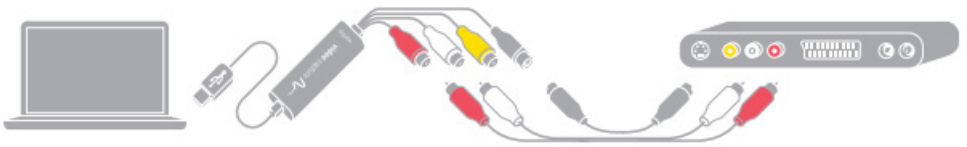

How to Use the Elgato Video Capture Software

1. On the first screen, name your video and specify its approximate duration.
2. Make sure your computer is connected. Choose the connection that was used (S-Video or Composite). Choose the aspect ratio, which should match the output of the source video. Select **Continue**.

your video source using the appropriate cables and adapters:

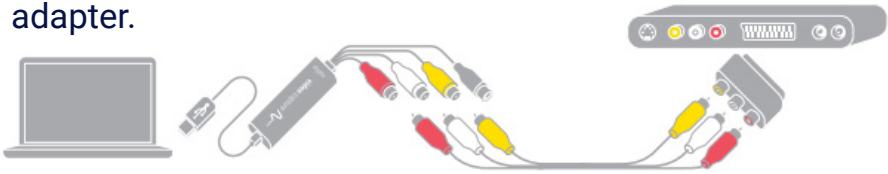

S-Video (VHS): Connect the S-Video input to the corresponding output of your video source. Also connect the RCA audio inputs with the audio outputs of the source.

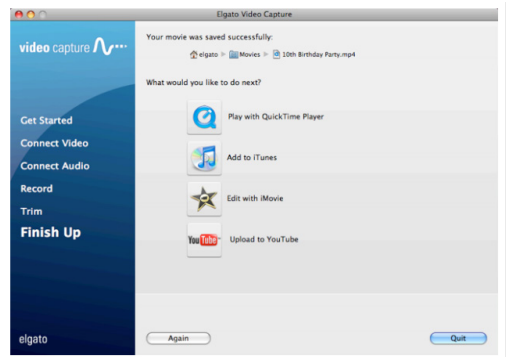

3. Make sure the **audio cables** are connected and your computer volume is on. When you hear audio through your computer's speakers, click **Continue**. If the volume is too loud, the meter will turn red.

SCART: Connect the composite-to-SCART adaptor to the SCART output of your video source. Connect the composite video inputs to the composite-to-SCART adapter.

4. Set your source video to the beginning and start playing it. Click the **Start Recording** button. Specify a time for the video to stop recording, or when you are done, click the **Stop Recording** button.

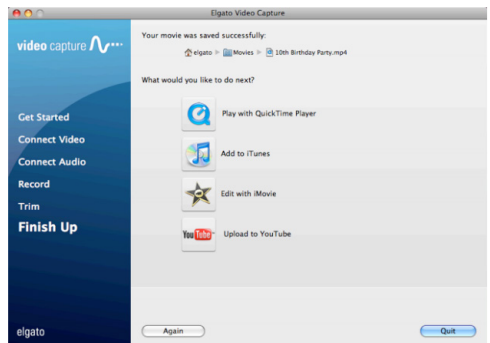

Software instructions continue on back of flap →
